

Huawei – Powering the Digital Transformation

Huawei is an international company with products and services spanning from smartphones over cloud and AI services to telecommunication infrastructure. In this talk I will present a brief overview on Huawei as a company and will then focus on the work done in the research centers across Europe. I will present our current efforts at the research center in Munich to combine meta optics with spatial light modulators to enhance the performance of wavelength selective switches for flexible optical networks.

Dr. Markus Wahle
Huawei Munich Research Center
